

Prasuna Podhigari

Software/Full Stack Engineer

podhigariprasuna99@gmail.com | 502-498-3447 | Seattle, WA, 98125 | [LinkedIn](#) | [GitHub](#)

Professional Summary

Full Stack Software Engineer with 3 years of experience across the complete software development lifecycle from requirements gathering to production deployment and support. Proven track record leading high-impact initiatives (including a full mapping platform migration), building scalable **microservices** and **front-end** applications, and driving system reliability through rigorous testing, monitoring, and root cause analysis. Strong foundation in both modern web stacks (**React, TypeScript, Go**) and systems-level programming (**C++, Python**), with hands-on **cloud** and **DevOps** experience across **AWS, Docker, Kubernetes**, and **Terraform**.

Technical Skills

Languages & Frameworks: Go, Python, C++, TypeScript/JavaScript, React, TypeScript, SPA, Microservices, RESTful APIs

Databases: & DevOps: AWS, Docker, Kubernetes, Terraform, Ansible CI/CD & Tooling: GitHub Actions, Jenkins, CircleCI, Graylog

Data and Messaging: PostgreSQL, Apache Kafka, RabbitMQ Cloud

Testing, Security & Quality: Jest, End-to-End Testing, Unit Testing, Integration Testing, API Testing

Practices: Agile, Scrum, SDLC, npm, root cause analysis, design patterns, OOP, data structures, Linux/Unix, **GitHub Copilot, Gemini, Prompt Engineering, Generative AI, Large Language Models (LLMs), AI-Assisted Development**

Professional Experiences

Associate Software Engineer, Flash Parking Inc.,

10/2024 – 07/2026 | Remote, Texas USA

- Led the platform's biggest project a full migration from **Mapbox to Google Maps** directly collaborating with Google Maps' team to plan and execute the transition across multiple repositories and platforms.
- Delivered the migration within a tight deadline while owning the effort **end-to-end**, resulting in significantly reduced map load times and a more responsive user experience.
- Built **front-end** features in **React** with **TypeScript**, and backend microservices and **REST APIs in Go**.
- Implemented **Kafka** and **RabbitMQ** for real-time parking spot availability updates across the platform.
- Containerized and deployed services with **Docker** and **Kubernetes**, provisioned **AWS** infrastructure using **Terraform**.
- Set up and maintained **CI/CD** pipelines (**GitHub Actions, Jenkins, CircleCI**), including automated unit/integration testing and post-deployment rollback verification.
- Used **PostgreSQL** for core application data and backend business logic. Used **Graylog** for centralized logging and monitoring, performing **root cause analysis** on production issues.
- Owned features **end-to-end** in a startup environment from requirements gathering through development, deployment, and production support. Collaborated cross-functionally in **QA**, engineering, and product management.
- Leveraged **Git, GitHub** workflows while documenting technical solutions using **JIRA**, Confluence, and other Atlassian collaboration tools through **Agile**, and collaborated across engineering teams to deliver high-quality software.

Software Developer, Nortek Consulting Inc.

01/2024 – 09/2024 | Texas, USA

- Developed modular enterprise software using **C++ and Python**, applying object-oriented programming principles, software design patterns, and clean coding practices to deliver maintainable and reusable applications.
- Implemented efficient data structures, algorithms, and multithreaded **C++** components to optimize application performance, memory utilization, and execution efficiency.
- Assisted in implementing cloud-based solutions using **AWS**, learned containerization with **Docker** and orchestration concepts with **Kubernetes**, and supported application deployments.
- Debugged software defects using **Linux** development tools, log analysis, and root cause analysis while collaborating with senior engineers to improve software reliability and code quality.
- Managed cloud-based solutions on **AWS**, using **Docker** for containerization and Kubernetes for orchestration. Used **Terraform** and **Ansible** for infrastructure automation on **Linux/Unix** systems
- Leveraged **Gemini** for code generation, refactoring, and documentation support, validating **AI-generated** output through automation testing and collaborated with **cross-functional** and **Agile** ceremonies.

Education

Master of Science, University of Central Missouri
Computer Science

01/2023 - 05/2024 | UCM, USA

Certifications

GitHub Copilot Certification - GitHub
